

Fuuz™ from MFGx

Feature Sets

Process workflows
for your business needs.

Data captured and stored
specific to your business.

Barcodes, labels, forms,
works orders, reports
and more.

Intuitive real-time
dashboards and KPIs.

Data Flow Designer

The Fuuz™ Data Flow Designer allows you to create business process workflows based on your skill level, with no-code, low-code or pro-code application development. The versatility of the Data Flow Designer enables your organization to augment and automate manual processes. This includes “off-the-shelf” software that Fuuz can tailor to meet your specific needs.

Schema Designer

Some systems allow you to add custom fields to an existing schema, but with Fuuz you're in total control. The Schema Designer lets you control and define specific data models to store information your business needs. Fuuz is the only commercial package that bypasses performance degradation when you create your own flows and schemes. Design and build the rock-solid solution your business needs to be competitive and efficient.

Document Designer

With the Fuuz Document Designer, you can incorporate pixel-perfect documents into any of your business processes, including barcode labels for in-process materials, shipping labels, quote forms, order acknowledgements, work orders and any other required shipping documents. Drag and drop your document designs in just moments, using data from literally anywhere with the native integration capabilities of Fuuz.

Dashboard Designer

Business intelligence and data mining are key to automating important business decisions. With Fuuz Dashboard Designer, leveraging your data into compelling, easy-to-use and intuitive dashboards has never been easier. Create dashboards for literally any business process, from sales to shipping, production, or OEE/TEEP line-side displays. Stakeholders can make decisions based on real data, in real time, from any device with internet access.

Fuuz™ from MFGx

Feature Sets

Connect equipment,
files and people.

Bridge and connect
systems in real time.

Drag and drop to build
any solution.

Device Gateway

The Fuuz proprietary Device Gateway seamlessly bridges the digital gaps between on-premise data sources and the cloud, without third-party bolt-ons. The Gateway features an endless number of device drivers for your industrial equipment, CMMs, printers and more. It supports local file processes and monitoring, so you can integrate flat files or other documents into your data flow. Install it on a single server or distribute it to your edge clients.

Browser Extension

Other platforms lack the ability to perform real-time exchange of information among your team, systems, software, and equipment. With the Fuuz web extension, this limitation is a thing of the past. The extension is a bridge between the data flows, apps, documents, dashboards (or anything else you've built in Fuuz) and your end-users or other systems. Augmenting your end users' current systems with an easy-to-use and code-free way to streamline their work is now easily done. Eliminate multiple apps, browsers, or dual data entry with the Fuuz extension by bringing everything into a common, single user interface. Add buttons, forms, dashboards, or other features you need to the screens your users already know and are comfortable using.

UI Builder

The Fuuz UI Builder puts the power of making awesome apps into your hands. Drag and drop everything you need onto your canvas and size, position and link to your workflows and datasets in Fuuz. Build any solution at any level of complexity. Unlike other no-code solutions, we built our platform with manufacturing in mind, so you won't run into the limitations and obstacles other solutions put in your way for your complex processes.

Fuuz™ is a cloud SaaS solution developed by MFGx, a Michigan-based software integration company, to connect multi-platform enterprise software, industrial equipment, operating systems, people and processes. For more, visit <http://www.fuuzplatform.com/>.
