

# Fuuz™ from MFGx iPaaS

The Fuuz iPaaS solution solves the problem of siloed manufacturing apps, software and devices that can't communicate with each other. The Fuuz Integration Platform as a Service (iPaaS) connects and integrates your processes, services, applications and data. The benefits of an iPaaS solution include improved connectivity, more visibility into data flows and workflows, better management of apps and software solutions that live on a single platform, plus the ability to scale as the enterprise grows – all with extensive data security measures.

## Functionality

**The Fuuz applications platform integrates solutions so manufacturers can achieve:**

- Software integration with a multi-tenant, cloud SaaS deployment model
- Device/PLC integration with automated processes and connected devices
- Real-time equipment data capture
- Integration of accounting/ERP with shipping carrier systems for more accurate shipping results
- EDI integration on one platform with automated inbound and outbound forms and documentation with on-demand real-time transactions

Fuuz iPaaS includes pre-built connectors to numerous popular apps and enterprise software solutions. No matter how complex your business, you can optimize all software and applications for efficiency and streamlined operations because everything lives on a single platform.

Fuuz™ is a cloud SaaS solution developed by MFGx, a Michigan-based software integration company, to connect multi-platform enterprise software, industrial equipment, operating systems, people and processes. For more, visit <http://www.fuuzplatform.com/>.
