

Fuuz™ from MFGx IIoT Solution

Fuuz, the applications platform for manufacturing businesses, delivers the Industrial Internet of Things (IIoT), the ability to capture, analyze and aggregate data on a single platform in real time.

Fuuz connects any, or all, of the software you currently use, whether it's ERP, MES, Finance or CRM. And Fuuz captures and shares machine data to automate maintenance requests, production posting, scrap posting, label printing and more.

Fuuz Out of the Box (OOTB) functionality delivers many standard device drivers, such as native and IP printers, serial devices, file folders, EthernetIP, Siemens, Modbus, TCP/IP, OPC-UA and more. And our library of prebuilt drivers keeps growing.

Fuuz is the only IIoT solution that provides simple and intuitive interface design tools, so if you need to augment your Human Machine Interface (HMI) or other in-house data collection systems, you can do it all on Fuuz.

Benefits

Drive process improvements and gain efficiencies from the data using intuitive and customizable Fuuz dashboards.

Connect PLCs, sensors, robots, scanners, RFID readers, GPS, weigh scales, software and more.

Get real-time, secure Publisher/Subscriber (Pub/Sub) connectivity between your on-premise devices and databases to our cloud backend.

Fuuz™ is a cloud SaaS solution developed by MFGx, a Michigan-based software integration company, to connect multi-platform enterprise software, industrial equipment, operating systems, people and processes. For more, visit <http://www.fuuzplatform.com/>.

Dashboards

Intuitive, easy to use

Analyze OEE/OAE, TEEP, shipping and logistics measures, quality control and SPC and more.

PLC integration opens up equipment data for analysis, for example, to automate operator transactions such as posting production and scrap rates and gathering critical OEE data.
